Usability Report & Final Prototype

What was tested?

1. Disabling notifications for one specific app in the notification manager.
2. Disabling all shopping app notifications at once by using the categories option.
3. Trading off notifications for two specific apps through sorting apps by genre.

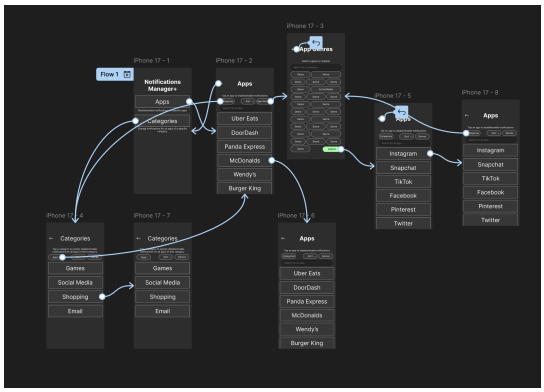
Key findings

1. Users were able to quickly navigate through the app.
    a. When starting the first task, all users were able to quickly navigate around the app.
2. Task one (disabling one specific app) was completed easily by all users.
3. Users had some confusion with the “Categories” tab.
    a. Users 2 & 3 had trouble finding a way to disable multiple apps at once, both navigating to the “Apps” tab rather than categories.
4. “Genres” may be a confusing term.
    a. Users 1 & 3 took some time finding a way to find a specific group of individual apps.

User recommended changes

1. User 2 suggested adding a quick “Categories” option in the “Apps” section for faster navigation.
2. User 3 recommended additional info on the main menu to specify the difference between “Apps” and “Categories”

Final Prototype



[Link to final prototype]

Changes

1. Added a short description of the “Apps” and “Categories” tabs. This will make the difference between the tabs clear.
2. Added a search bar in the apps section. Although this was not brought up during the testing due to the nature of the prototype, it will make searching for one specific app much faster.

3. Changed the wording of “Genres” to “App Genres”. This will make it more distinct from “Categories,” since that may have caused some confusion during the testing.
4. Added a quick swap from “Apps” to “Categories” and vice versa. If a user realizes they would rather disable all notifications from a category while browsing the apps section they can simply switch to the other page.
